

Performance Plus : Socomec has teamed up with Panduit and Stulz to provide a single source of solutions for use in data centers.

Benfeld, 10 Janvier 2014

Three complementary specialists share their expertise to offer data centers the latest technological advances for meeting evolving requirements in terms of electrical supply, cooling systems and infrastructure.

Performance Plus : it's a slogan that packs a punch and promises a commitment. And behind that punch is a serious partnership : three companies, each individually recognized as experts in their respective fields pooling their talents to optimize the performance and efficiency of the three strategic pillars of a data center – the IT infrastructure, the precision cooling system and the electrical supply.

Each of these solution providers brings their know-how and expertise to the table :

- Panduit optimizes the performance of the physical infrastructure of the data center for high availability.
- Stulz enables precision cooling of the data center environment for efficiency and sustainability.
- Socomec assures continuity and control of power for the data center.

With around 70% of data center operating costs allocated to the electricity supply and cooling, the three-way partnership offers operators a reduction of their energy consumption and losses. The key? The association of innovative cutting-edge technological solutions which are designed to work together for a perfectly uniform operation.

Beyond improved performance levels and reduced overall operational expenditure, the solutions offered also open the way to creating “cloud-ready” physical infrastructures.

Complete individual and bespoke solutions

On the basis of predefined solutions, the partners offer a complete response that can be adapted to individual data center requirements, from initial pre-sales consultation through to development, installation and ongoing support.

Faced with the growing complexity of a data center, Performance Plus gives companies access to know-how from specialists in their field and helps them reach their targets in terms of costs, efficiency and sustainability.

Example 1 : “Cloud in a box” scenario

Example 2 : “High density” scenario

Example 3 : Confinement scenario

Panduit

Panduit is a world-class developer and provider of leading-edge solutions that connect, manage and automate the physical infrastructure. Panduit Unified Physical InfrastructureSM (UPI) based solutions help customers integrate core business systems for a smarter, unified business foundation. Our robust partner ecosystem, global staff, and unmatched service and support make Panduit a valuable and trusted partner. (www.panduit.com)

Stulz

Stulz is a world-class expert in the field of precision cooling systems. The company offers the widest range of cooling solutions for industry. It has originated major innovations such as the high-output EC ventilator technology and the *Dynamic Free Cooling* and *direct free cooling* technologies based on cooling systems for computer rooms (CRAC).
