

SIRCO M :

Modular universal switches

As a world leader in electrical switching and protection systems Socomec launches a new generation of switches which are particularly easy to integrate and to operate.

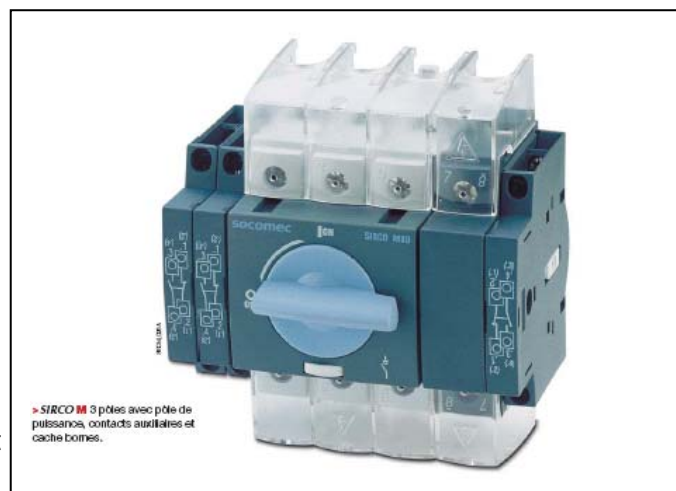

SIRCO M offers a large number of accessories that are available for all products of the series.

Application:

- Distribution Panel – Incoming or feeder
- Panel mounted or DIN modular
- Local safety isolation
- Machine control

Originality and advantages:

- With a limited number of references it is possible to create solutions for various applications.
- The integration of an innovative switching concept patented by Socomec allows for a universal switch within the same product (direct handle).
- All products are modular, of constant depth and allow for quick and easy installation: the switches are DIN rail or screw-mounted. Most accessories are fixed with snap-on fixing brackets.
- Highly innovative design for a multitude of applications.
- Many accessories such as auxiliary contacts with pre-break and signalisation functions, handles for direct or external operation as well as additional fuse-holder modules are already available.

Features:

- From 16 to 160 A, 3 or 4 pole.
- The association of two 3 or 4 pole 'standard' switches with a standardised accessory enables the assembly of:
 - 6 or 8 pole load break switches.
 - 3 or 4 pole changeover switches (I-0-II) or (I-I+II-II).

Date of market launch:

January 2008
