

## **SOCOMECS UPS Supports the European Data Centre Code of Conduct**

*SOCOMECS UPS has been officially listed as Endorser of the European Data Centre Code of Conduct by the European Commission. This recognition confirms our commitment to the development of technologically green solutions characterised by high energy efficiency.*

April 2011

The European Data Centre Code of Conduct is the result of the European Commission's work to incentivise sustainable energy policies and encourage the adoption of best energy efficiency practices among data centre operators and managers.

By adhering to the Code, companies are making a commitment to reduce data centre energy consumption by improving their power usage effectiveness.

A leader in electrical power supply solutions for mission critical applications, SOCOMECS UPS has always been very sensitive to environmental issues, and was one of the first UPS manufacturers to follow the Code.

The European Commission recently acknowledged the validity and effectiveness of SOCOMECS UPS activities to promote high efficiency solutions to data centre users, by awarding the company the Code of Conduct Endorsement.

This is important recognition which rewards the company's achievements in terms of cost reduction, gains in energy efficiency, and reduction in environmental impact. It also highlights SOCOMECS's commitment to the development of data centre power protection solutions that use cutting-edge technologies, such as 3-level topology, making it possible to achieve the highest level of energy efficiency, while also guaranteeing maximum load protection performance. For example, the UPS GREEN POWER family leads efficiency ratings in the online double conversion technology market (96%), as certified by TÜV SÜD and Bureau Veritas.

*"We are proud to have gained this recognition, attesting to our leadership in advanced solutions for power availability and quality. Following the European Code of Conduct is tangible proof of our continuing dedication to developing solutions that respond to the fundamental needs of data centre operators, guaranteeing total business continuity protection while ensuring top range levels of energy efficiency. Our objective has always been to focus on leading innovation guided by environmental awareness; economic development accompanied by reduced power consumption is the only path for true sustainable growth" stated Denis Finck, SOCOMECS UPS Division Strategic Marketing Manager.*

### **Company Profile**

**SOCOMECS Group** is an independent manufacturer specialising in the distribution, control and quality of power supplies serving low-voltage electrical networks, industry and the services sector.

*Created in 1922, the industrial group has developed two business areas: Low Voltage Switching Components and Protection Systems (load-break switches, fuse-combination switches, changeover switches, fuse links, electronic control and protection, enclosures, cabinets etc.) and Uninterruptible Power Supply Systems (UPS, load transfer modules, rectifier-chargers, harmonic compensators, 400 Hz frequency converters).*

*With 23 subsidiaries throughout the world, 9 industrial sites (France, Italy, Tunisia, India, China) and a 383 million Euro turnover, SOCOMEC combines technological innovation and technical know-how with high-quality pre- and post- sales services.*

*SOCOMECS UPS, part of the group, is a leading company in the business continuity sector. It is the ultimate representative in terms of the following applications: ICT, Data Centres, Healthcare, Transport, Industry, Commerce, Public Administration and Finance, devising efficient, reliable and scalable solutions.*

*SOCOMECS-branded UPS systems offer high performance levels and save a considerable amount of energy. The company observes the European Commission's Code of Conduct by adopting its best practices while participating in the UN Global Compact initiative; it has also signed up to the Green Grid association.*
